

Safety Eyewear

Manufacturing and technological expertise

uvex industrial health and safety – the systems provider with world class manufacturing expertise

80% of our entire net output is produced in our own manufacturing plants, where we combine the very latest technology with the power of innovation and years of experience. Our quality management systems meet the very highest requirements and all plants are certified in accordance with the ISO 9001:2008 quality management standard.

At its main location in the Bavarian city of Fuerth, the uvex safety group has brought together its expertise in safety eyewear, wide-vision goggles, prescription safety spectacles and laser protection goggles to create a unique centre of expertise for protective eyewear.

The uvex product development team works to put ideas into practice and bring projects to life. All uvex products exceed the requirements of the relevant standards. The mechanical and optical properties of our products are subject to continuous testing in our laboratory and our unique, high performance coating systems are developed and produced in-house.

The uvex safety group's quality standards are exemplary a key part of which is our environmental mission statement, which is binding at all our sites, and forms a core part of company policy.

MADE IN GERMANY 

uvex i-performance

Next Level Equipment

Newly defining performance

The uvex i-performance product system supports the natural movement of the human body, reducing pressure and stress while also maximising comfort.

Constant product development is carried out on the basis of the latest physiological research and technology, thereby ensuring maximum performance with quantifiable product benefits.

uvex i-3 AR

Ensuring the eyes are also wide awake.

uvex i-3 AR are innovative safety spectacles with anti-reflective coating on both sides of the lenses. The high light conductivity ensures perfect vision at all times, for example when reading test parameters or working with highly reflective components. Strain on the eyes is reduced and the wearer will find it easier to focus.

These spectacles are particularly suitable for workplaces with a combination of artificial and natural light. In combination with exceptional wearer properties, this means the uvex i-3 AR has all the prerequisites of safety spectacles that people enjoy wearing. They always allow a clear view of what matters.

Coating

The anti-reflective coating on both sides provides 100% protection against UV 400 and a transmission factor of more than 96.5%, which means distracting reflections are effectively prevented.

Transmission (transparency)

With the anti-reflective coating, the uvex i-3 AR reaches a higher transmission factor than safety spectacles with regular coating technology – ensuring perfect vision without reflections.

Nose loops

The extremely soft adjustable Softflex nose loops ensure the spectacles do not slip at any point and sit comfortably on the nose.

Side arm inclination

The variable side arm inclination allows flexible adjustment to individual requirements and optimum coverage of the eyes. The Softflex ear pieces ensure a secure and pressure-free fit.

Technology

Properties · Lens tinting

UV 400
All polycarbonate lenses offer 100% UV protection up to 400 nm, regardless of lens tint.

Lightweight
Ultra light for permanent wearer comfort. So light that you can wear them all day long.

The highest optical quality in accordance with EN 166
Freedom from distortion prevents the symptoms of fatigue. Ideal for constant use in work which place particularly high demands on the eyes.

High Impact Protection
Extremely impact-resistant polycarbonate for maximum protection against all mechanical risks in line with EN 166.

OEM
Customised uvex safety eyewear – Personal protective equipment with your company logo. For more information, please contact your sales advisor.

Suitable for use with prescription glasses
Design shaping ensures there are no pressure points.

Individual side-arm inclination
Adjustable side-arm inclination guarantees that uvex safety eyewear can adapt to fit any head shape, ensuring higher wearer acceptance.

Individual length adjustment
Multiple position, side arm length adjustment of uvex spectacles ensures an individual, comfortable fit.

uvex quattroflex
Four pads around the sensitive ear area ensure a comfortable, pressure-free fit.

uvex duo-flex
The unique, patented soft pads on the ear pieces snugly fit any head shape, preventing pressure points behind the ears.

Tinting	Protection	Marking	Transmission	Standard	Features and areas of application
AR (anti-reflective)	UV	2(C)-1.2	> 96.5%	EN 166 EN 170	– Working environments with strong or overhead light, glare or mixed lighting – Reduces reflections
clear	UV	2(C)-1.2	approx. 91%	EN 166 EN 170	– Working environments with low or no dazzling glare
amber	UV	2(C)-1.2	approx. 88%	EN 166 EN 170	– Poorly lit working conditions (improved contrast)
light blue	UV	2(C)-1.2	approx. 85%	EN 166 EN 170	– Changing light conditions – Extremely brightly lit working environments
variomatic HC-AF	UV	5-2<3.1	10 – 40%	EN 166 EN 172	– Changing light conditions (bright/dark)
silverlight mirror	UV	5-1.7	approx. 48 – 56%	EN 166 EN 172	– Changing light conditions (bright/dark)
grey 23%	UV	5-2.5	approx. 23%	EN 166 EN 172	– Sun glare filters (glare protection) – Full signal colour recognition
grey 23%	UV	5-3.1	approx. 14%	EN 166 EN 172	– Sun glare filters (glare protection) – Full signal colour recognition
brown	UV	5-2.5	approx. 20%	EN 166 EN 172	– Sun glare filters (glare protection) – Full signal colour recognition – Improved contrast
Tinting	Protection	Welding shade	Transmission	Standard	Features and areas of application
welding filter green	UV + IR	1.7 / 2 / 3 / 4 / 5 / 6	43 – 1%	EN 166 EN 169	– Protection from IR and UV radiation – Minimised damage from welding sparks
welding filter grey	UV + IR	1.7 / 3 / 5 / 6	43 – 1%	EN 166 EN 169	– Protection from IR and UV radiation – Minimised damage from welding sparks – Perfect colour recognition – Can be used as sunshields or as a welding safety goggle – Permanent anti-fogging properties on the inside and extreme scratch-resistance on the outside

The following lens materials are used for uvex safety glasses:

PC = polycarbonate CA = cellulose acetat G = glass HG = hardened glass

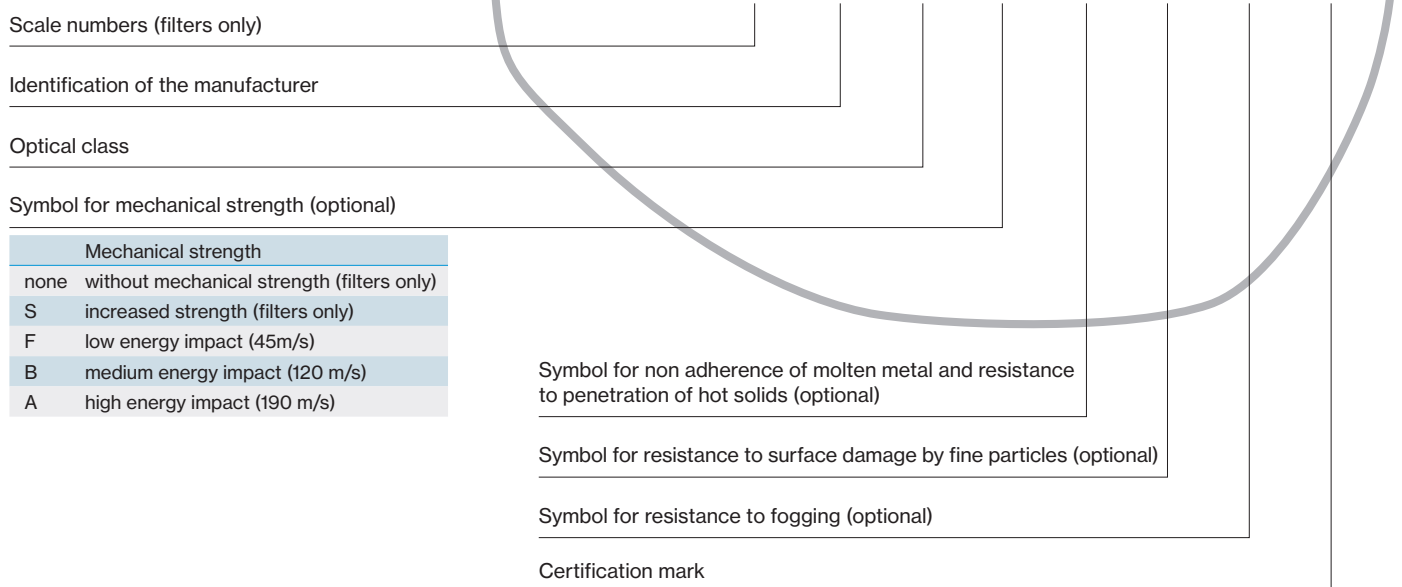

Labelling and norms

Marking on frame

Designation	Description of application areas
none	General use Non specific mechanical risks, risks due to UV and/or visible IR light
3	Liquids Liquids (droplets and splashes)
4	Coarse dust particles Dust with > 5µm grain size
5	Gas and fine dust particles Gas, vapour, mist, smoke, and dust with < 5µm grain size
8	Short circuit electric arc Electric arc due to short circuit in electrical equipment
9	"Molten metal and hot solids" Splashes of molten metal and penetration of hot solids

Marking on lens

Coating technology

uvex optidur · uvex infradur

uvex optidur coated lenses have the same properties on both sides.

Lenses coated with **uvex optidur NCH** are extremely scratch-resistant and are also highly resistant to chemicals. The lacquer system features nanotechnology, which considerably increases the non-stick properties of the lens making them easier to clean. As a result, water-based and oily marks can be removed effortlessly.

Lenses coated with **uvex optidur 4C PLUS** are non-fogging, scratch-resistant on both sides and anti-static. The anti-fog coating is permanent and won't wash off.

Lenses coated with **uvex variomatic HC-AF** are light reactive ensuring optimum vision by automatically darkening within 10 seconds and returning to their original tint within 30 seconds. Now available with the tried and tested uvex supravision HC-AF technology (permanently anti-fog on the inside and scratch-resistant on the outside). These lenses are particularly suitable for working conditions with frequent alternation between inside and outside, light and dark.

uvex infradur coated lenses provide optimum protection against infrared radiation.

uvex infradur PLUS welding lenses protect against ultraviolet and infra-red radiation as well as glare. The coating minimises welding spark damage.

The **uvex infradur AF** lens coating is a grey welding filter that protects against UV and IR radiation; protects against glare and offers full colour recognition in accordance with uvex sun glare filters. The coating delivers permanent anti-fogging properties on the inside, extreme scratch-resistance on the outside while minimising welding spark damage.

Coating technology

uvex supravision

uvex supravision coated lenses have different features on both sides – permanent anti-fogging properties inside, extreme scratch-resistance outside.

Lenses coated with **uvex supravision HC-AF** are anti-fog on the inside and extremely scratch resistant on the outside, as well as resistant to chemicals. The nano clean effect ensures that the lenses are very easy to clean and less susceptible to dirt.

Lenses coated with **uvex supravision performance** are scratch resistant on the outside and the anti-fogging properties on the inside are twice the strength of uvex supravision HC-AF coated lenses. The anti-fog coating is permanent and therefore, won't wash off. The nano clean effect on the outside ensures that the lenses are very easy to clean and less susceptible to dirt. This coating is perfect for sudden exposure to condensation and where frequent cleaning of the lenses is required.

Lenses coated with **uvex supravision extreme** are scratch resistant on the outside and have permanent anti-fog on the inside. The lenses cannot steam up because the coating never reaches a point of saturation. Particularly suitable for workplace environments with high air humidity and long-lasting exposure to condensation.

uvex i-3

Taking the wearer experience to a new level

The wearer should not conform to the product – the product should conform to the wearer!

uvex understands that each safety spectacle wearer is unique and this is central to our design philosophy of developing products which can be adapted to individual needs.

The uvex i-3 with its innovative features, is the perfect example of an all wearer spectacle combining functionality and comfort with a high level of protection.

Metal-free construction

The newest injection-moulding technology is used in the production process. Three materials are injection-moulded together for the middle part of the frame. This high-tech bonding is free of metal, completely safe, saves weight and guarantees extended product life.

Ergonomically designed bridge piece

A comfortable fit is ensured with soft, curved Softflex bridge pieces.

Soft ear pieces

Reliable grip in every situation: the soft Softflex ear pieces guarantee a safe, stable and pressure free fit.

Soft nose loops

The Softflex nose loops can be flexibly adjusted to individual requirements ensuring a non-slip fit whilst sitting comfortably on the nose.

Side-arm flex zone

The adjustable side-arm flex zone ensures the uvex i-3 will fit narrow or wide faces equally well.

Variable side-arm angle

A side-arm inclination with five positions enables the spectacle to be customised to each wearer. Individual adjustment and provides optimum side protection.

uvex astrospec 2.0

A new style of guaranteed protection

The next generation of our best seller:

uvex astrospec 2.0 is the new improved version of the world's most popular uvex safety spectacles. The new design in a range of fashionable colours features pioneering technology to ensure maximum wearer acceptance, providing guaranteed protection in any situation.

The wide panorama lens offers optimum protection, with different uvex coatings depending on the area of application. The ergonomic construction with flexible 2K side arms and ventilation system with a labyrinth seal ensure optimum wearer comfort even when worn for extended periods.

Labyrinth seal
Ventilation with labyrinth seal for a comfortable temperature at all times.

Central section arc
uvex astrospec: the central section arc is a classic design.

Folds flat
Fits well in any pocket: the special design of uvex astrospec 2.0 when folded is exceptionally flat and space.

Panorama lens
Reliable protective eyewear: The scratch-resistant anti-fog panorama polycarbonate lens with integrated side protectors ensures optimum coverage of the eyes.

Flexible side arms
Perfect fit: The flexible 2K side arms with variable inclination adapt to fit any face shape and offer optimum wearer comfort even when worn for extended periods. The combination of soft and hard components ensures a secure, pressure-free fit.

Safety Spectacles

uvex pheos guard

The innovative pheos guard system is a functional expansion of the successful pheos range. A winning combination of pheos spectacles, extra frame and headband. The comfortable frame creates a close seal to protect from particle ingress and splashes.

Top choice for working environments with dust exposure due to combination of anti-fog coated lenses and extra frame. Headband can be added and suitable for working at heights or in confined spaces. Also aids compatibility with other items of PPE.

Step 1: position the extra frame on inside of pheos lenses.

Step 2: clip the side hooks of the frame into the lenses of the spectacles.

Step 3: attach the top hook to the forehead section of lenses.

Step 4: if required, add headband directly to side arms by clipping hook into fitting on side arms.

uvex pheos guard

uvex pheos guard is ready for use to offer protection at all times! uvex pheos guard can be ordered as a complete set as separate components.

uvex academy

Industrial protective eyewear

A practical introductory seminar on the use of PPE products for eye protection.

- The basic applications of PPE eyewear, including products that protect against mechanical dangers, chemicals and radiation (e. g. welding protection), and products designed for specialised applications
- Demonstration and assessment of the dangers posed by mechanical finishing, infrared and ultraviolet radiation (e. g. encountered during welding or in chemicals), illustrated by case studies
- Assessment of the risk of eye injury in the workplace
- Explanation of how these risks can be dealt with efficiently in each workplace
- Comprehensive overview of the requirements of industrial protective eyewear, standards, applications, risk assessment and how to care for protective eyewear
- Information on the classification of protection products based on their labelling and the areas of application of the various types of equipment

Target group

Those responsible for the work-related health and safety of employees within a company, e.g. health and safety officers and specialist purchasers.

For more information or to book a place, please visit uvex-academy.de, call +49 (0)911 9736 1710 or email academy@uvex.de

laservision

Innovative laser protection solutions

Rapid developments in laser technology mean that laser protection is becoming ever more important in terms of personal safety. New laser applications in all areas of industry, research and medicine demand new and unique safety and protection solutions. laservision, a member of the uvex group is one of the leading global producers of laser protection products. It develops, manufactures and distributes laser protection glasses, large-scale laser protection (mobile screens and safety curtains), small filters and cabin windows for all laser types and applications.

Laser protective spectacles and cabin windows

Based on physical properties, such as radiation intensity and focusing capability (spatial coherence), laser light is potentially very hazardous, particularly for the eyes. The valid laser protective norms (EN 207 and EN 208) and safety regulations (BGV B2) stipulating the wearing of laser safety eyewear are the response to these hazards.

This laser safety eyewear with coated or absorbent special lenses and plastics is a core focus of the laservision product portfolio. We have more than 30 years of experience in this technology. At the same time, laservision offers an extensive range of glass and plastic filter materials as windows for installation in machine housings, partitions and curtains.

Screens

Alternatively, it is possible to screen out laser radiation by mechanical means and to protect potentially endangered personnel during laser operation in this way. Screening against laser radiation may take the form of curtains, partitions or even fixed insulating walls. These can be installed in the workplace, or they may be integrated in machinery housing. laservision offers standard and customer-specific solutions for screening which comply with the applicable standards. On account of the wide range of possible materials and solutions, we advise our customers on their protection issues in situ at their own premises in order to find the best possible solution.

Active protection systems

For automated laser processing operations, i.e. operations which are not under constant surveillance, to be classified as test class T1, European standard EN 60825-4 housing must maintain a survival rate of 30,000 seconds. However, where laser output and radiation intensity are constantly on the increase, rates of this order are no longer achievable with passive protection systems, particularly in the case of window materials.

The newly patented active cabin window system from laservision provides the ideal and simplest solution to this problem in the form of integrated electronics installed within the safety circuitry of the laser system.

When laser beams hit the plastic pane with enough output to activate the sensor integrated in the frame, the laser is immediately switched off before hazardous radiation can be transmitted through the pane. The system gives users a complete CE-certified class T1 system in line with the applicable machine construction directive. In combination with an active cabin wall system, this makes a complete and certifiable solution available for industrial high-performance laser units operating in the 820 to 1100 nm wavelength spectrum.

Training

laservision, in cooperation with the uvex academy offers a programme of modular courses on laser safety. These feature compulsory annual laser safety training together with special courses for those responsible for laser safety, advanced customised seminars, an internship in laser safety and measuring techniques.

laservision is an active and knowledgeable partner for various National and International standards committees and takes part in domestic and International research projects in the field of laser safety in conjunction with research institutions.

Welding Protection

uvex i-vo · uvex super fit · uvex super f OTG · uvex ultrasonic flip-up

A new generation of welding protection eyewear available with different grey-tint lenses and various protection classes. The innovative technology affords protection from UV and infrared light while maintaining perfect colour recognition in accordance with EN 172.

The special uvex infradur AF coating has anti-fog properties which prevents the inside of the lenses misting up and the extreme scratch-resistance on the outside keeps damage from welding sparks to an absolute minimum.

The new welding safety eyewear fits the face perfectly and is extremely comfort – enhancing the wearer's experience.
